

Standardized Performance Measures for Comprehensive Cardiac Center Certification

Joint Commission Quality Measures for Disease-Specific Care Certification

Mandatory Comprehensive Cardiac Center Certification Performance Measures		
Measure ID	Measure Name	Measure Description
CCCIP-01	High-Intensity Statin Prescribed at Discharge	Patients who are hospitalized with a diagnosis of an acute myocardial infarction (AMI) and were prescribed a high-intensity statin at hospital discharge.
CCCIP-02	Mineralocorticoid Receptor Antagonist Prescribed at Discharge	Patients with a diagnosis of heart failure with a left ventricular ejection fraction (LVSD) $\leq 40\%$ who were prescribed a mineralocorticoid receptor antagonist at discharge.
ACHF-01	Beta-Blocker Therapy (i.e. Bisoprolol, Carvedilol, or Sustained Release Metoprolol Succinate) Prescribed for LVSD at Discharge	Beta-blocker therapy (i.e., bisoprolol, carvedilol, or sustained-release metoprolol succinate) is prescribed for heart failure patients with LVSD at discharge. For purposes of this measure, LVSD is defined as chart documentation of a left ventricular ejection fraction (LVEF) less than 40% or a narrative description of left ventricular systolic (LVS) function consistent with moderate or severe systolic dysfunction.
ACHF-02	Post-Discharge Appointment for Heart Failure Patients	Patients for whom a follow-up appointment for an office or home health visit for management of heart failure was scheduled within 7 days post-discharge and documented including location, date, and time.
ACHF-06	Post-Discharge Evaluation for Heart Failure Patients	Patients who receive a re-evaluation for symptoms worsening and treatment compliance by a program team member within 72 hours after inpatient discharge.
Optional Inpatient Comprehensive Cardiac Center Certification Performance Measures		
Measure ID	Measure Name	Measure Description
CCCIP-03	Cardiac Rehabilitation Referral from an Inpatient Setting	Patients who have had one of the following qualifying events/diagnosis during their current inpatient encounter are to be referred to an outpatient cardiac rehabilitation program. Qualifying events: • Diagnosis of a myocardial infarction (MI) • Coronary artery bypass graft (CABG) surgery • Percutaneous coronary intervention (PCI) • Cardiac valve repair/replacement
CCCIP-04	Cardiac Rehabilitation Referral for Heart Failure Patients with Reduced Ejection Fraction from Inpatient Setting	Patients with a diagnosis of heart failure with a reduced ejection fraction (HFrEF) of $\leq 40\%$ who are referred to outpatient cardiac rehabilitation.

CCCIP-05	Cardiac Rehabilitation Enrollment - Inpatient	Patients with one of the qualifying events/diagnoses who attend at least one (1) cardiac rehabilitation session, within 90 calendar days of hospital discharge. Qualifying events: • Diagnosis of a myocardial infarction (MI) • Coronary artery bypass graft (CABG) surgery • Percutaneous coronary intervention (PCI) • Cardiac valve repair/replacement
Optional Outpatient Comprehensive Cardiac Center Certification Performance Measures		
Measure ID	Measure Name	Measure Description
CCCOP-01	Cardiac Rehabilitation Referral from an Outpatient Setting	Patients evaluated in an outpatient setting, who have had one of the following qualifying events/diagnosis are to be referred to an outpatient cardiac rehabilitation program. Qualifying events: • Diagnosis of myocardial infarction (MI) • Percutaneous coronary intervention (PCI)
CCCOP-02	Cardiac Rehabilitation Referral for Heart Failure patients with Reduced Ejection Fraction from an Outpatient Setting	Outpatients with a diagnosis of heart failure with a reduced ejection fraction (HFrEF) of $\leq 40\%$ who are referred to outpatient cardiac rehabilitation.
CCCOP-03	Cardiac Rehabilitation Enrollment - Outpatient	Patients with one of the qualifying events/diagnoses who attend at least one (1) cardiac rehabilitation session, within 90 calendar days of an outpatient procedure or office visit. Qualifying events: • Diagnosis of a myocardial infarction (MI) • Percutaneous coronary intervention (PCI)
ACHFOP-03	Hospital Outpatient Mineralocorticoid Receptor Antagonists Prescribed for LVSD	Patients with a diagnosis of heart failure, a New York Heart Association (NYHA) class II-IV, and heart failure with a left ventricular ejection fraction (LVSD) $\leq 40\%$ or a narrative description of left ventricular systolic (LVS) function consistent with moderate or severe systolic dysfunction who are prescribed a mineralocorticoid receptor antagonist.
ACHFOP-06	Hospital Outpatient Discussion of Advance Directives/Advance Care Planning	Outpatients who have documentation in the medical record of a one-time discussion of advance directives/advance care planning with a healthcare provider.
